

Riyadh Ali

Software Developer

Phone: [07435339631](tel:07435339631)

Email: willinggod170@gmail.com

I am an enthusiastic software developer that love to code and learn. I have developed many significant skills to design, build and maintain software programs. I am passionate, hardworking and keen about problem solving and enhancing my potentials to be a better developer. I am eager to join and work in a collaborative team.

Git Hub Profile: <https://github.com/Halladen>

Skills

- Languages: Python, JavaScript
 - Frameworks: Node JS, Express, Django, Django REST Framework, FastAPI, React
 - Testing Framework: Cypress
 - Web Technologies: HTML, CSS, Bootstrap, Tailwindcss
 - Databases: MySQL, MongoDB
 - Version Control: Git, GitHub
 - Other Tools: Docker
 - Additional Skills: Object-Oriented Programming (OOP), Database Design
-

Education

University of Sulaymaniyah

Bachelor's Degree - English Language

Achievements

PDA Software Development – Clyde college 11/24

CodeSpace - Software Development – Edinburgh College 07/24

Scientific Computing with Python – FreeCodeCamp Platform 03/23

Projects

Full-Stack E-commerce Web Application

Developed a comprehensive e-commerce platform using the Django framework, providing users with a smooth and intuitive shopping experience. The platform includes essential e-commerce features such as user registration, product management, cart functionalities, and payment integration. The admin dashboard enables efficient management of the entire application, while user profiles allow customers to manage their personal details and orders.

Sorting Algorithms

Building a platform for visualizing the best five sorting algorithms like quick, merge, insertion, selection and bubble sort. It has functionality to resize and reset bars with option to change the speed of sorting process.

Full-Stack Drag & Drop Notes

Built a dynamic drag-and-drop notes application with a full-stack architecture using FastAPI on the backend and React JS on the frontend. The project allows users to create, manage, and rearrange notes with an intuitive drag-and-drop interface. The backend, built with FastAPI, handles note storage, updates, and deletions, while the React frontend provides a smooth and responsive user experience.

Full-Stack Task Management

Built a task management app with a responsive user interface that has task creation, retrieving, editing and deletion functionality.
